Declaration on the Use of Artificial Intelligence

Each student must complete and sign an individual copy.

Student name: Gabriele Guidotti

Student number: 123245

I declare that all decisions and technical content that I produced for this project are my own work.

The following AI tools were used to assist in the development of the project and the preparation of the report. If no AI tool was used, write 'None'.

Tools used

GLM-5.3 (Zhipu AI) - large language model;

Qwen Code - AI-assisted command-line coding tool.

Purpose and extent of use

AI tools were used to support the setup of the project workflow and the drafting of exploratory and training code: environment and repository configuration, exploratory data analysis code (plots, correlation matrix, cross-correlation by lag, ACF/PACF), lagged feature construction, explicit standardization, comparison of OLS/Ridge/Lasso models, outlier handling strategies (clipping and winsorizing), and the implementation of train.py, my_model.py and utils.py. All modelling decisions (choice of lag ranges, clipping percentiles, target treatment, regularization strength and final model selection) were taken and verified by the group by running the experiments on the released data and inspecting the resulting metrics and plots. Every component of the submitted code was reviewed, understood and validated by the group before submission.

I declare that I fully understand the operation of every component of the project, including those developed with the assistance of the AI tools listed above.
